

ONLINE JOB PORTAL SYSTEM

DOCUMENTATION REPORT

1. PROJECT OVERVIEW

- **Course Title:** Web Programming (CoSc3091)
- **Assignment Type:** Individual Assignment I (Weight: 40%)
- **Project Title:** Online Job Portal (Employers & Job Seekers)
- **Developer Name:** Almaz Endegena
- **Department:** Computer Science

This project is a dynamic, full-stack web application designed to connect job seekers with potential employers. It addresses real-world employment matching by allowing employers to post open vacancies and job seekers to browse listings, upload resumes, and track submitted applications. The project fulfills all core academic requirements of the CoSc3091 course, integrating HTML5, CSS3, JavaScript, PHP, and MariaDB/MySQL.

2. FEATURE LIST & MANDATORY FUNCTIONALITIES

- **User Authentication & Authorization:**
 - **Role-Based Registration:** Users can create an account as an **employer** or **jobseeker** with required validation.
 - **Password Security:** Passwords are hashed using PHP's **password_hash()** function prior to database insertion.
 - **Session Control:** Persistent user sessions track logged-in users across pages with a working logout script.
- **Employer Management Dashboard:**
 - **Publish Job Vacancies:** Employers can submit job details including title, company, location, and description.
 - **Track Applications:** Employers can view a list of job seekers who applied to their postings and download attached resume files.
- **Job Seeker Features:**
 - **Browse Vacancies:** Real-time display of all available job listings retrieved dynamically from the database.
 - **Resume Upload & Application:** Job seekers can attach and upload digital resume files (**.pdf/.doc**) directly to specific job listings.
 - **Application History:** Job seekers can monitor their submitted applications inside their personal dashboard.
- **Contact & Communication:**
 - Functional contact page storing user inquiries directly into the database for admin review.
- **Responsive User Interface:**

- Custom CSS Flexbox layout featuring a collapsible right-side drawer navigation menu optimized for mobile viewports.

3. DATABASE DESIGN & SCHEMA

The system relies on a relational MariaDB/MySQL database (`job_portal_db`) using foreign keys to maintain referential integrity

Table Structures:

- **users Table:** Stores user profiles and encrypted credentials (`id`, `full_name`, `email`, `username`, `password`, `role`, `created_at`).
- **jobs Table:** Stores vacancy listings published by employers (`id`, `employer_id`, `title`, `company`, `location`, `description`, `created_at`).
- **applications Table:** Junction table linking job seekers and jobs with file upload paths (`id`, `job_id`, `jobseeker_id`, `resume_file`, `applied_at`).
- **contacts Table:** Stores user feedback submitted via the contact form (`id`, `name`, `email`, `message`, `submitted_at`).

4. USER INTERFACE & SCREENSHOT FLOW

- **Home Page (`index.php`):** Displays a landing overview introducing the platform and core functionality.

- **About Page (about.php):** Contains student profile details, academic department information, and system objectives.

- **Job Listings (jobs.php):** Presents open job opportunities retrieved from the database with resume submission forms.

- **Authentication Pages (login.php & register.php):** Secure login forms and role-selection registration forms with client/server validation.

- **User Dashboard (dashboard.php):** Context-aware workspace that dynamically shifts options based on whether the logged-in user is an employer or job seeker.

Position Description & Requirements

5. LOCAL SETUP & DEPLOYMENT INSTRUCTIONS

1. **Source Code Extraction:** Place the [job-portal](#) project directory inside your web server root (e.g., [htdocs/job-portal](#) or Chromebook MariaDB directory).
2. **Database Import:** Open phpMyAdmin or MariaDB terminal and execute the [database.sql](#) script to build the schema and tables.
3. **Database Configuration:** Ensure [config/db.php](#) credentials match your local database instance:
 - **Host:** [localhost](#)
 - **Username:** [root](#)
 - **Database Name:** [job_portal_db](#)
4. **Permissions:** Ensure the [uploads/](#) folder has write permissions for storing uploaded resume documents.
5. **Execution:** Access the web application via <http://localhost/job-portal/index.php>.

6. STATEMENT OF INDIVIDUAL CONTRIBUTION

I declare that this full-stack web application is my own individual academic work. All backend PHP logic, SQL queries using prepared statements, client-side validation scripts, and responsive CSS stylesheets were created and tested independently to meet the requirements of Web Programming (CoSc3091).
